

HTML

Hyper Text Markup Language

- HTML is the code that is used to structure of web page.
- The component used to design the structure of websites are called HTML tags.

HTML is Like a House Structure

Visual Studio

Visual studio (**VS Code**) is one of the best code Editor for different programming languages specially HTML.

Visual Studio Code

After installing the VS Code simply we write this code its like a road. Every time when we write HTML we use this code and then start HTML.

Visual Studio generate this code automatically when we press Shift+1.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Document</title>
</head>
<body>

</body>
</html>
```

Now we discuss the starting code in detail.

```
<!DOCTYPE html> Tell us that this is a HTML5 Document.
```

```
<html lang="en"> The language which we use in HTML is English.
```

```
<head> Head of HTML Project
```

```
    <title>Document</title> Here we write the Project title or website name
```

```
</head> here head Tag is closed
```

```
<body>
```

```
    here we write all tag that we use in complete html.
```

```
</body>
```

```
</html> here html is closed
```

Most Usable Tags in HTML

Note: Most of html elements have opening & closing tags and some not like
`<p>` here we write our content `</p>`

`<br>`

- | | |
|---------------------|-----------------------------|
| 1. P(paragraph tag) | 8. Table |
| 2. H1 to H6 tags | 9. Bold |
| 3. A(anker tag) | 10. Subscript tag |
| 4. Image tag | 11. Superscript tag |
| 5. List | 12. Under line & italic tag |
| 6. Br(break tag) | 13. I frame tag |
| 7. Mark Tag | 14. Form |

Write Project Name in Title

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>

</body>
</html>
```

Note: Open your Vs Code and Create New file with the name of **index.html** and then press Shift+1 Above code generated automatically. After that you can write Title Name.

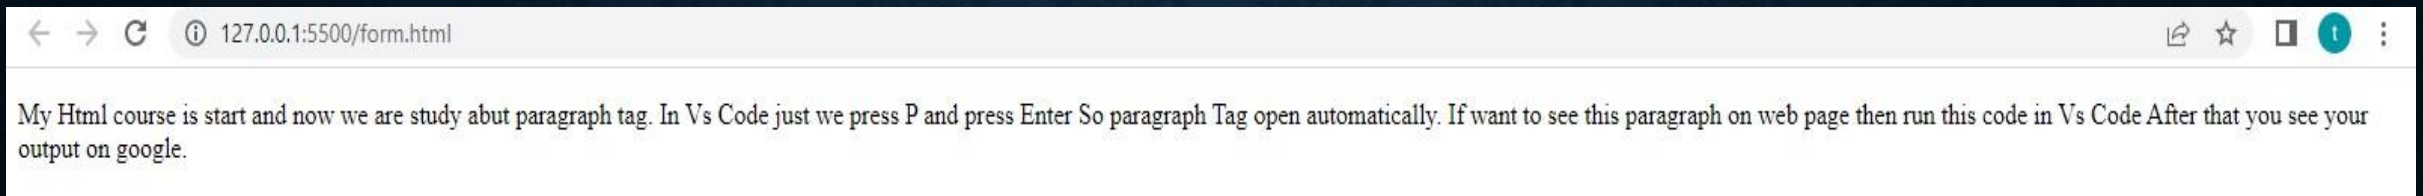

P (Paragraph Tag)

If we want to write a paragraph in HTML and then we use **P Tag**.

Again Remember All Tags work in body:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <p> My Html course is start and now we are study abut paragraph tag. In Vs Code just we press P and
  press Enter So paragraph Tag open automatically. If want to see this paragraph on web page then run this
  code in Vs Code After that you see your output on google. </P>
</body>
</html>
```

Output in chrome

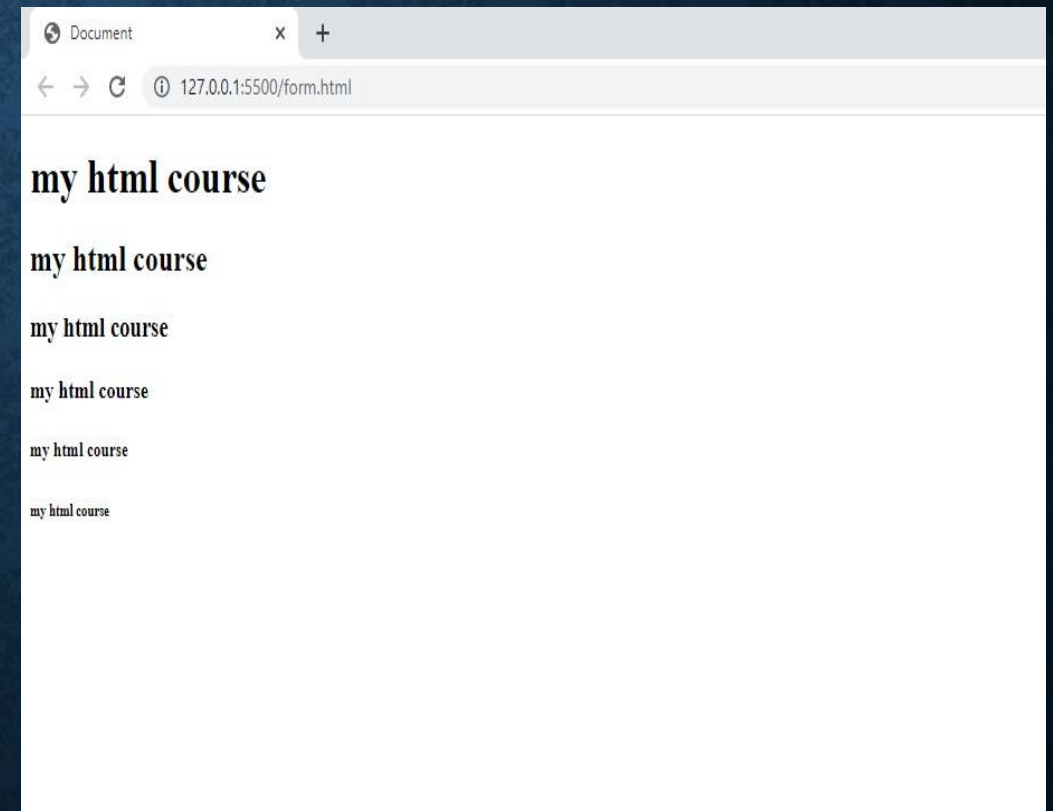

Heading Tags

If we want to write a Heading then we use **H1** , **H2** , **H3**, **H4**, **H5**, or **H6** Tag. H1 is large size and h2 to h6 are small as compare to h1.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <h1>my html course</h1>
  <h2>my html course</h2>
  <h3>my html course</h3>
  <h4>my html course</h4>
  <h5>my html course</h5>
  <h6>my html course</h6>
</body>
</html>
```

Output in Chrome

Anker Tag

```
<a href="" "" ></a>
```

If we want to add any link or another website link then we use **anker Tag**. In Vs Code we just press a.

```
<a href="" put here any link ">Tell here about link </a>
```

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <a href=" https://www.youtube.com ">go to YouTube </a>
</body>
</html>
```

Image Tag

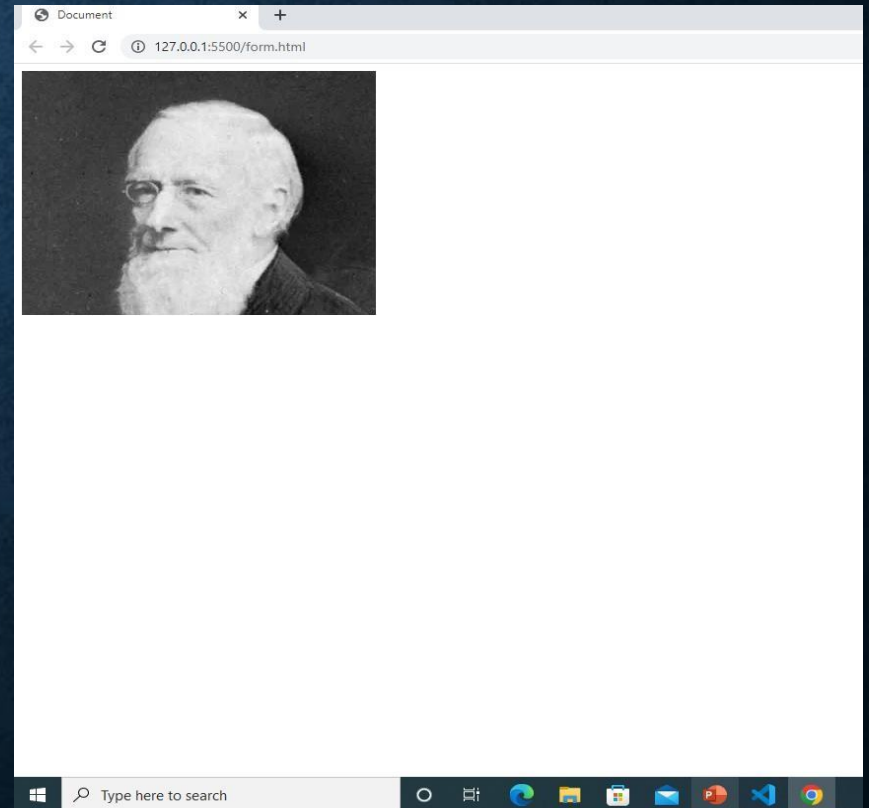

If we want to add image then we use **img tag**. In vs code just press img and enter.

```

```

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  
</html>
```

Output

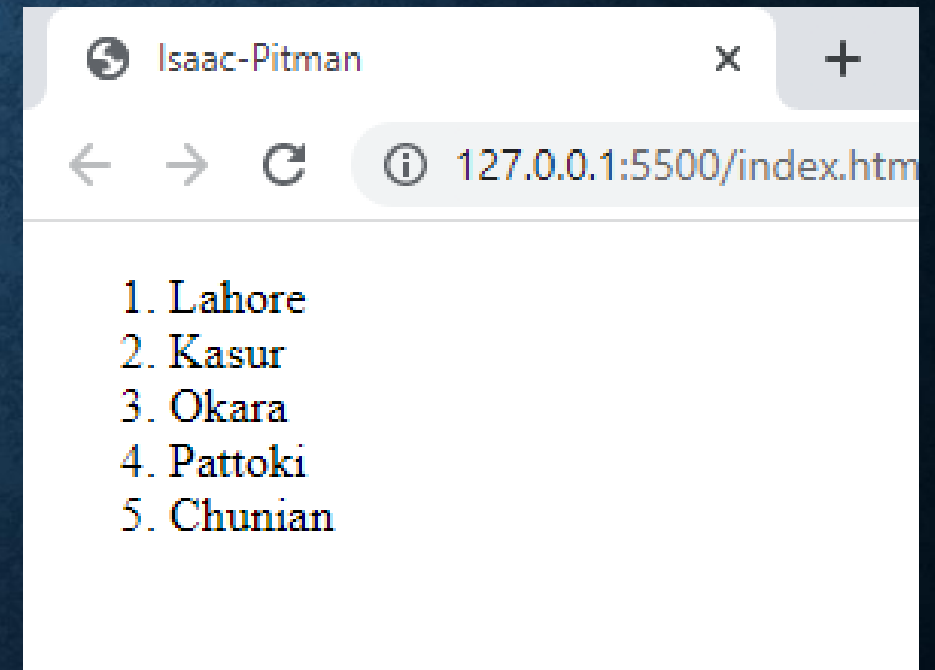

Order List

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <ol>
    <li>Lahore</li>
    <li>Kasur</li>
    <li>Okara</li>
    <li>Pattoki</li>
    <li>Chunian</li>
  </ol>
</body>
</html>
```

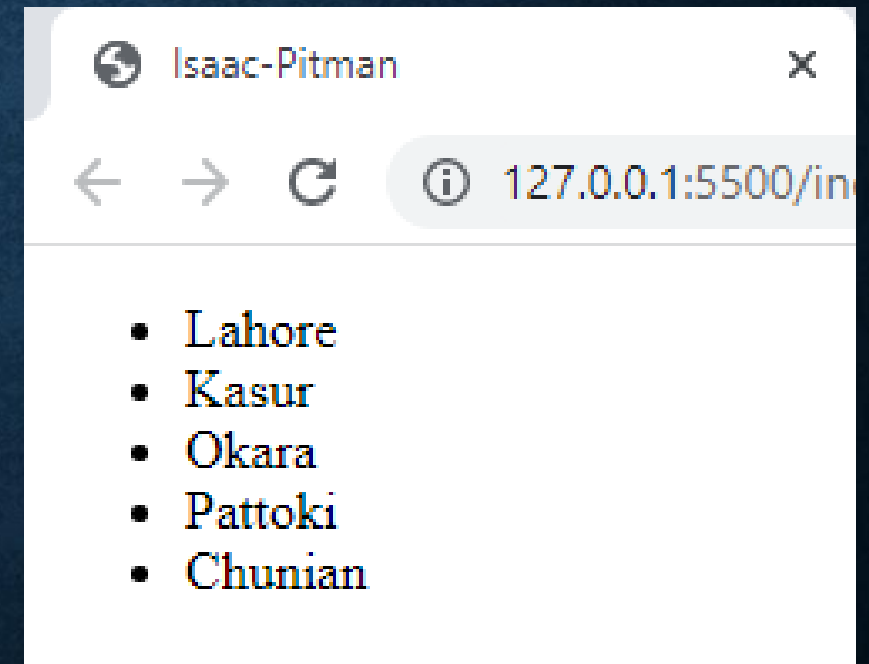

output

UnOrder List

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <ul> here just we change ol to ul opening and closing tag
    <li>Lahore</li>
    <li>Kasur</li>
    <li>Okara</li>
    <li>Pattoki</li>
    <li>Chunian</li>
  </ul>
</body>
</html>
```

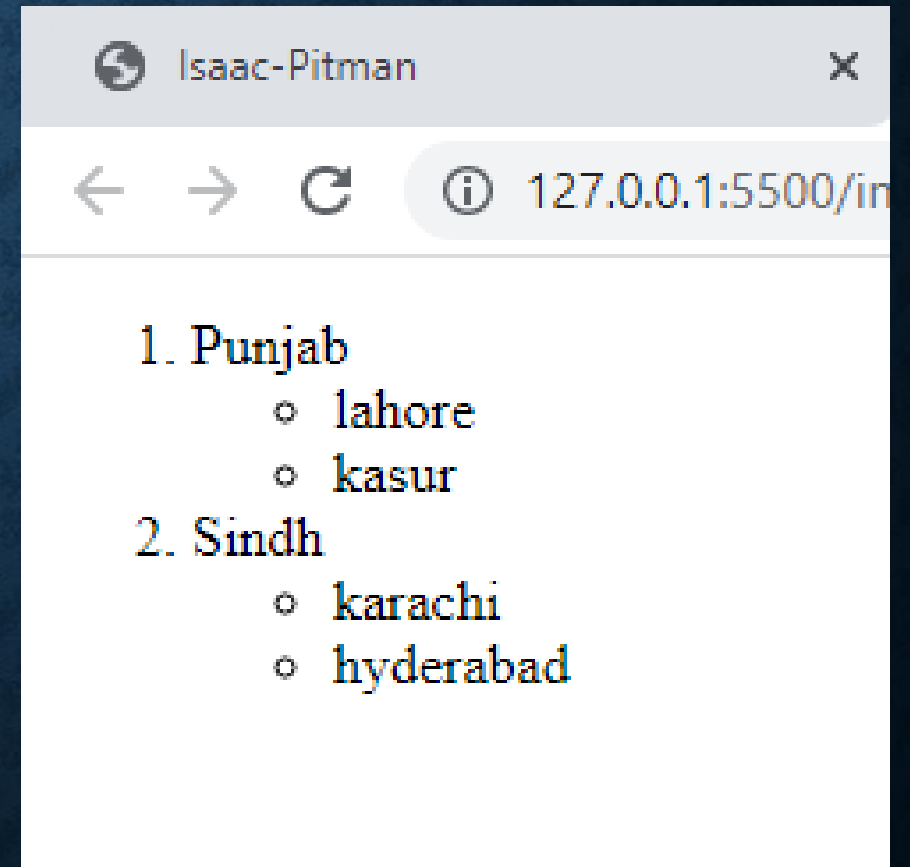

Output

Nested List

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <ol>
    <li>Punjab</li>
    <ul>
      <li>lahore</li>
      <li>kasur</li>
    </ul>
    <li>Sindh</li>
    <ul>
      <li>karachi</li>
      <li>hyderabad</li>
    </ul>
  </ol>
</body>
</html>
```

Output

Br (Break Tag)

Br tag is used for jump to next line

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <ol>
    <li>Lahore</li> <br>
    <li>Kasur</li> <br>
    <li>Okara</li> <br>
    <li>Pattoki</li> <br>
    <li>Chunian</li> <br>
  </ol>
</body>
</html>
```

Output

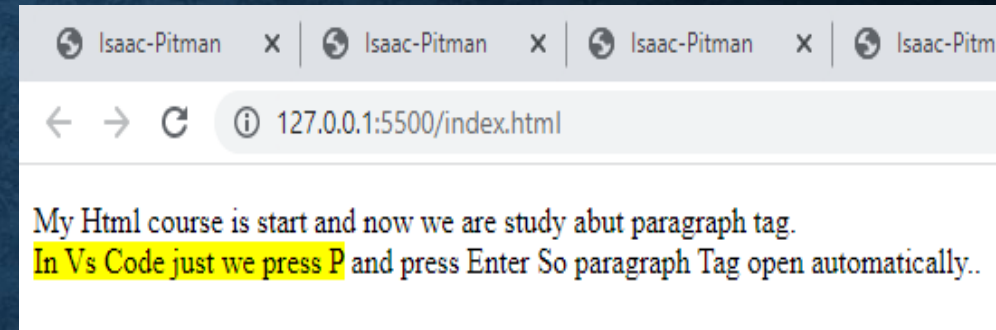

Mark Tag

Mark tag is use for highlight the text

Which text we want to highlight write in mark tag as we write below.

Output

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <p> My Html course is start and now we are study abut paragraph tag.
  <mark>In Vs Code just we press P </mark> and press Enter So paragraph </P>
</body>
</html>
```

Table

Table consists on :

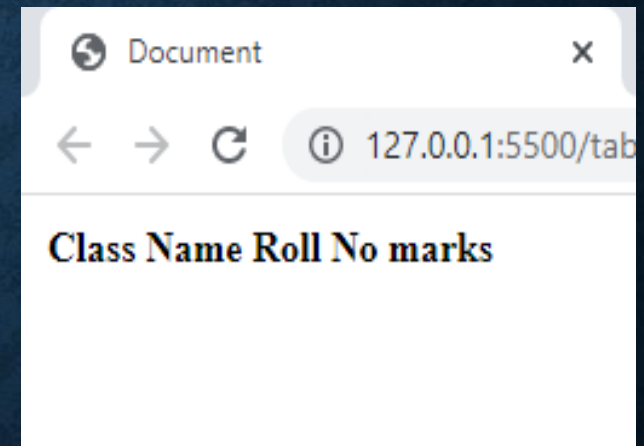

1. Table Row (tr) below table have 3 rows
2. Table head (th) 1st line (green) is called head
3. Table data (td) All content which we write is data like class, name, marks, etc.

We create a table using Tr Td Th

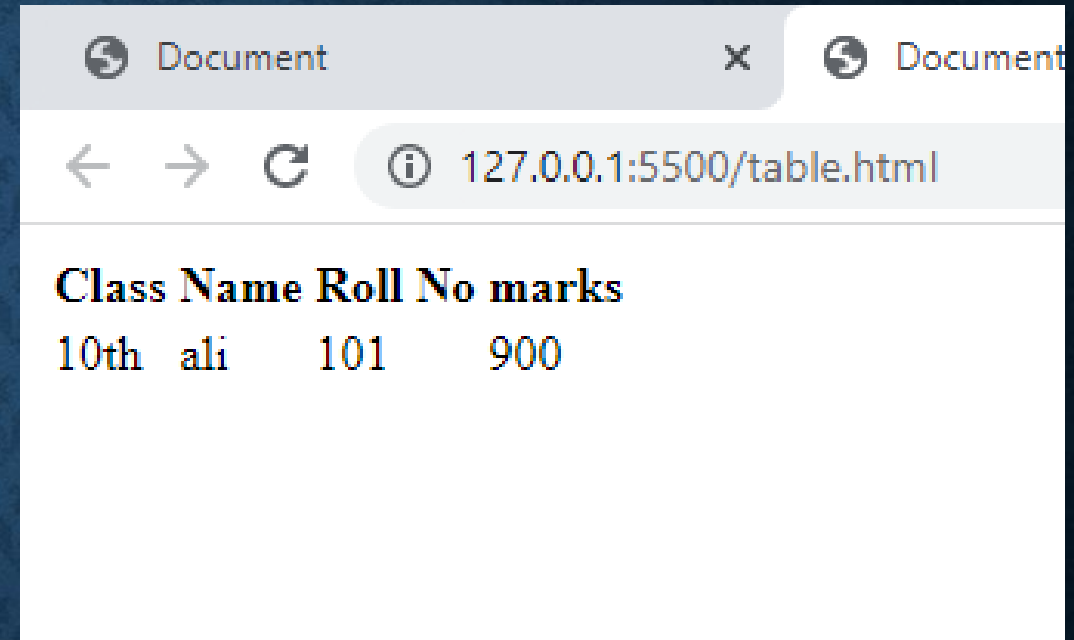

Class	Name	Roll No	Mark's
10th	Ali	101	900
10th	Aliya	102	900

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <table>
    <tr>
      <th>Class</th>
      <th>Name</th>
      <th>Roll No</th>
      <th>marks</th>
    </tr>
  </table>
</body>
</html>
```

Class	Name	Roll No	Mark's
-------	------	---------	--------

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>My HTML Course</title>
</head>
<body>
  <table>
    <tr>
      <th>Class</th>
      <th>Name</th>
      <th>Roll No</th>
      <th>marks</th>
    </tr>
    <tr>
      <td>10th</td>
      <td>ali </td>
      <td>101</td>
      <td>900</td>
    </tr>
  </table>
</body>
</html>
```

In the same way you add more data and your table will be created

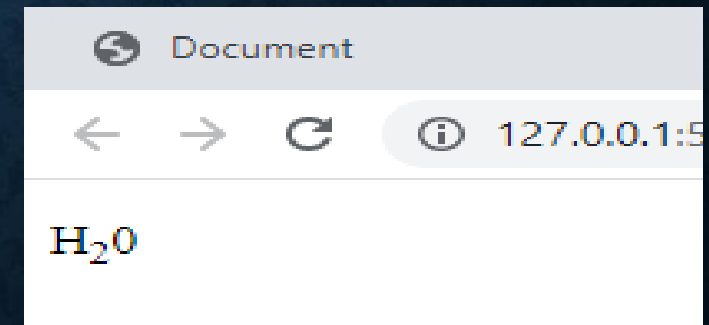

Bold Tag

If we want to bold any text then we use bold tag. In vs code we just press b and press.

`<b>write here which we want to bold </b>`

Subscript tag

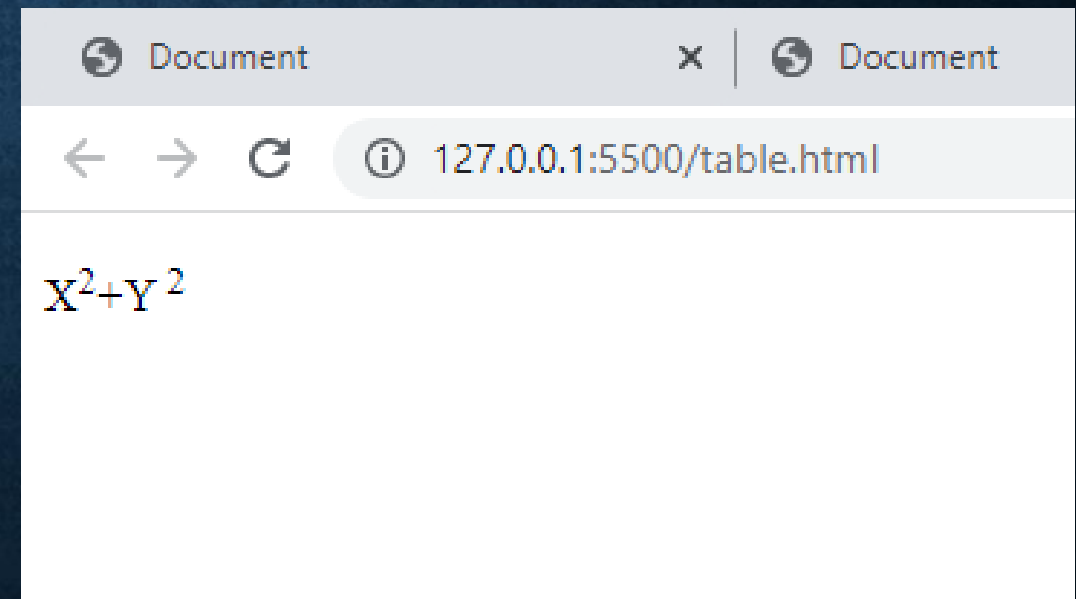

If we want to write a formula then we use this tag. In vs code we just press sub and press.
Formula like this :

Superscript tag

If we want to write a formula then we use this tag. In vs code we just press sup and press.
Formula like this :

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Document</title>
</head>
<body>
  <p> X<sup>2</sup>+Y <sup>2</sup> </p>
</body>
</html>
```

Underline and italic

If we want underline the text and italic then we use this tag. In vs code we just press u for underline and press I for italic

For underline

`<u>` here text is underline `</u>`

For italic

`<i>` here text is italic `</i>`

I frame is use for YouTube video link

```
<iframe src="'link'"> here paste Link </option>
```

Use for personal video which are saved in pc and want to show on website

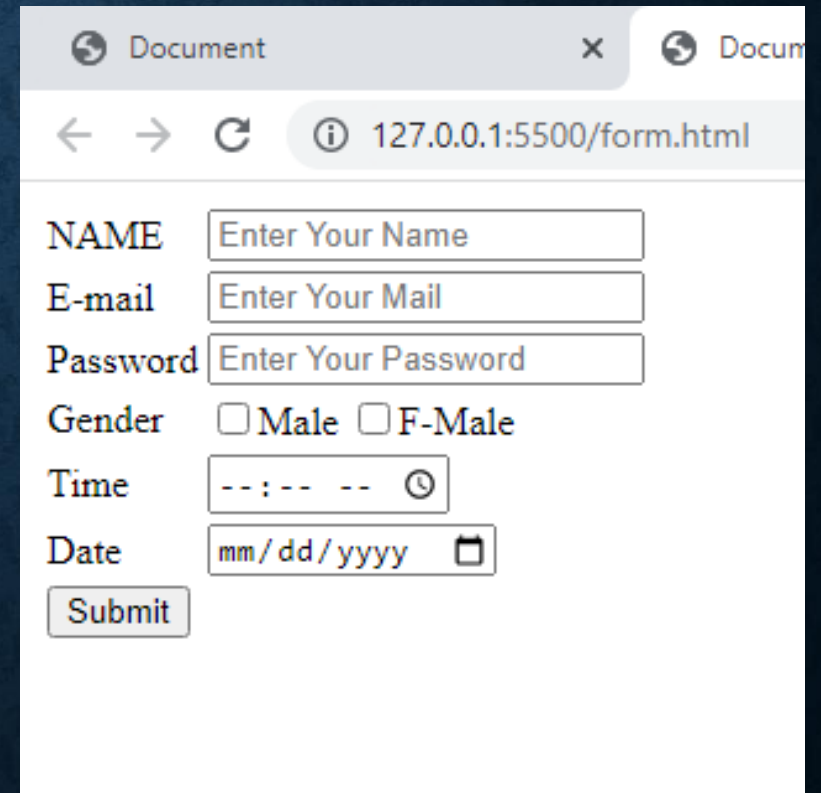

```
<video src="'myVid.mp4'"> My Video </video>
```

Form

Forms are used to collect data from the user
sign up/login/help requests/contact me

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Document</title>
</head>
<body>
  <Form> here we put different input tag for creating
    form like name,email,gendr,time,date,&submit
    etc. </Form>
</body>
</html>
```

We also create a form with the help of table like as 

NAME	Enter Your Name
E-mail	Enter Your Mail
Password	Enter Your Password
Gender	☐ Male ☐ F-Male
Time	--:-- -- 
Date	mm/dd/yyyy 
Submit	

Comments

Comments are written in html for the help of coder comments are not appear in web page. In vs code we write an additional text as a comment and press ctrl+ /

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Document</title>
</head>
<body>
  <!-- this is a comment -->

</body>
</html>
```
