

**Online Diagnostic Centre finder with Sample Collection and
Reporting system
Design Document**

Version 1.0

Group Id: F2202969C2

Supervisor Name : Khaqan Khawer

Revision History

Date (dd/mm/yyyy)	Version	Description	Author
2/9/23	1.0	Introduction Of The Project Design Document is used to give an application development team overall guidance to the architecture of the application project. Design Document contains 1. ERD 2. Sequence Diagram 3. Architecture Design Diagram 4. Class Diagram 5. Database Design 6. Interface Design Test Cases	BS140202359

Table of Contents

1. [Introduction of Design Document](#)
2. [Entity Relationship Diagram \(ERD\)](#)
3. [Sequence Diagrams](#)
4. [Architecture Design Diagram](#)
5. [Class Diagram](#)
6. [Database Design](#)
7. [Interface Design](#)
8. [Test Cases](#)

1. Introduction of Design Document

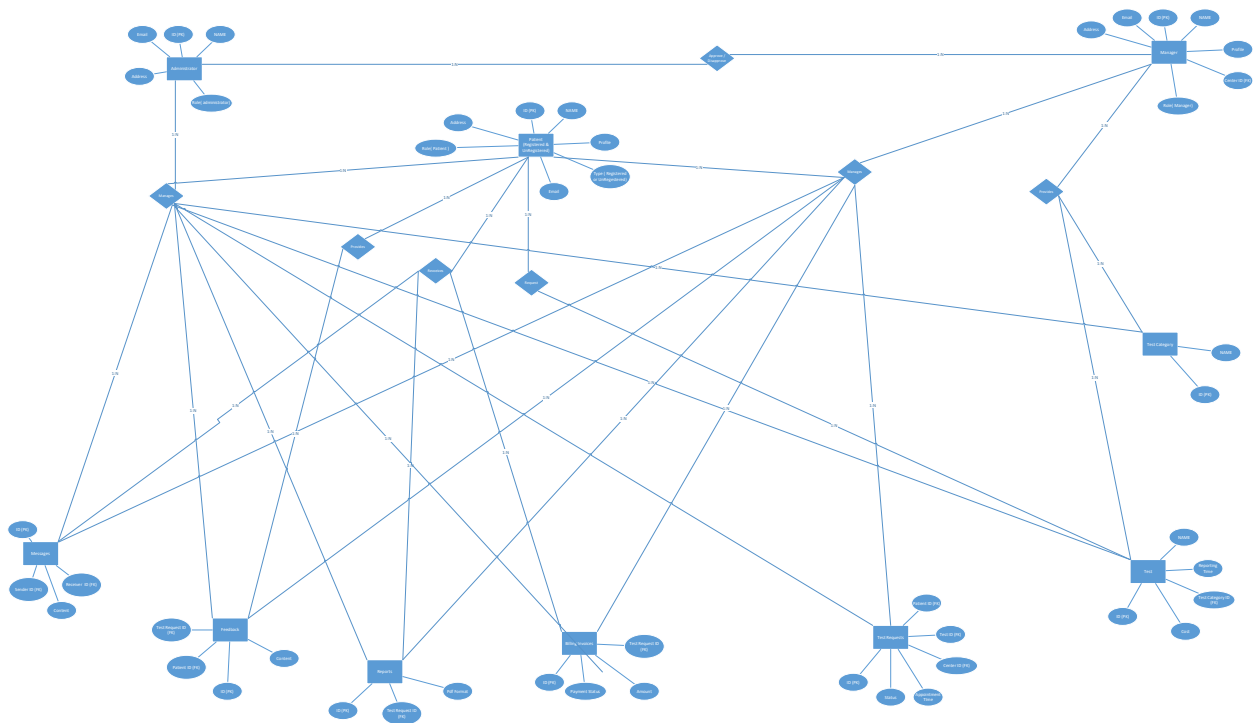

A **Design Document** also known as a technical specification is a description of how you plan to solve a problem. A design document is the most useful tool for making sure the right work gets done. The Software Design Document is a document to provide documentation which will be used to aid in software development by providing the details for how the software should be built. It is a written description of software product, that a software designer writes in order to give a software development team overall guidance to the architecture of the software project.

The Software Design Document (SDD) usually contains the following information:

- The **Data Design** describes structure that resides within the software. Attributes and relationships between data and objects dictate the choice of data structures.
- The **Architecture Design** uses information flowing characteristics, and maps them into the program structure. The transformation mapping method is applied to exhibit distinct boundaries between incoming and outgoing data. The data flow diagrams allocate control input, processing and output along three separate modules.
- The **Interface Design** describes internal and external program interfaces, as well as the design of human interface. Internal and external interface designs are based on the information obtained from the analysis model.
- An **Entity Relationship** Model describes interrelated things of interest in a specific domain of knowledge. A basic ER model is composed of entity types and specifies relationships that can exist between entities.
- **Sequence Diagrams** are sometimes called event diagrams or event scenarios. A sequence diagram shows, as parallel vertical lines, different processes or objects that live simultaneously, and, as horizontal arrows, the message exchanged between them, in the order in which they occur.
- A **Class Diagram** in the Unified Modeling Language is a type of static structure diagram that describes the structure of a system by showing the system's classes, their attributes, operations(or methods), and the relationships among objects.

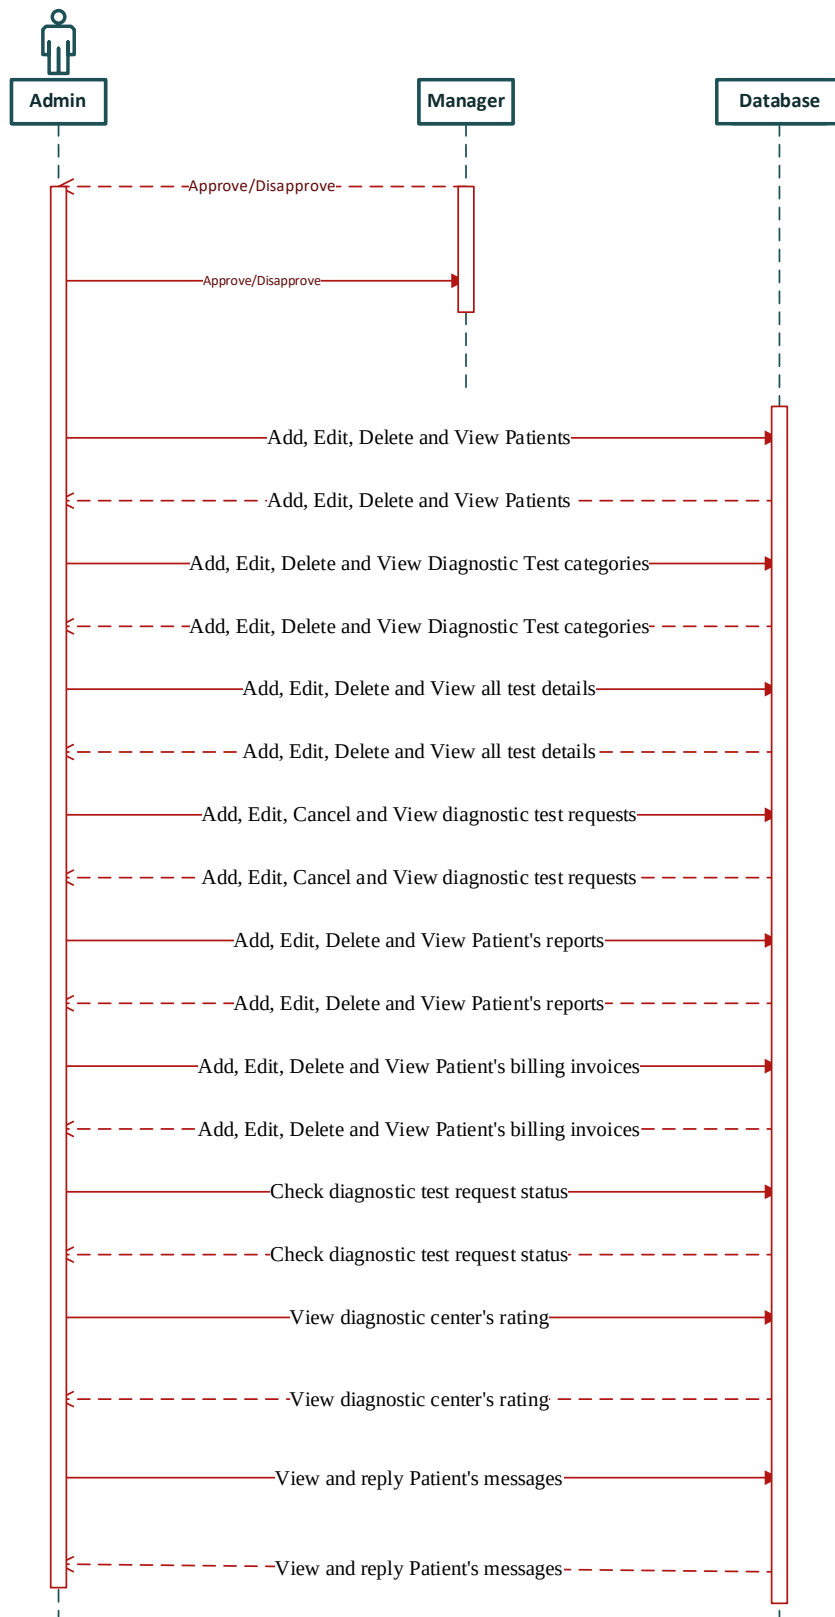

- The ***Test Case*** is a set of conditions or variables under which a tester will determine whether a system under test satisfies requirements or work correctly.

2. Entity Relationship Diagram (ERD) (To be developed using Microsoft Visio or any other drawing software of your choice)

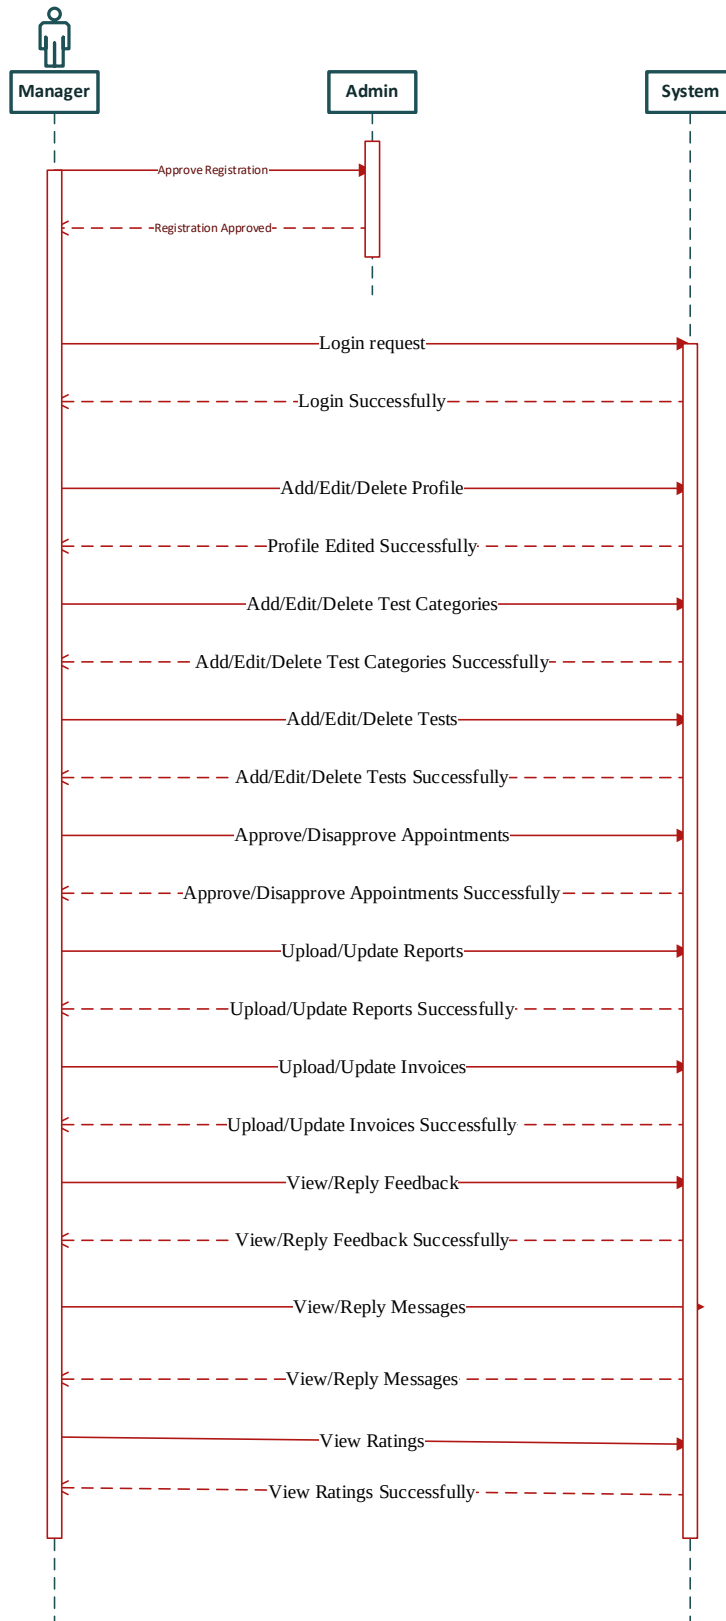

3. Sequence Diagrams (To be developed using Rational Rose or any other drawing software of your choice)

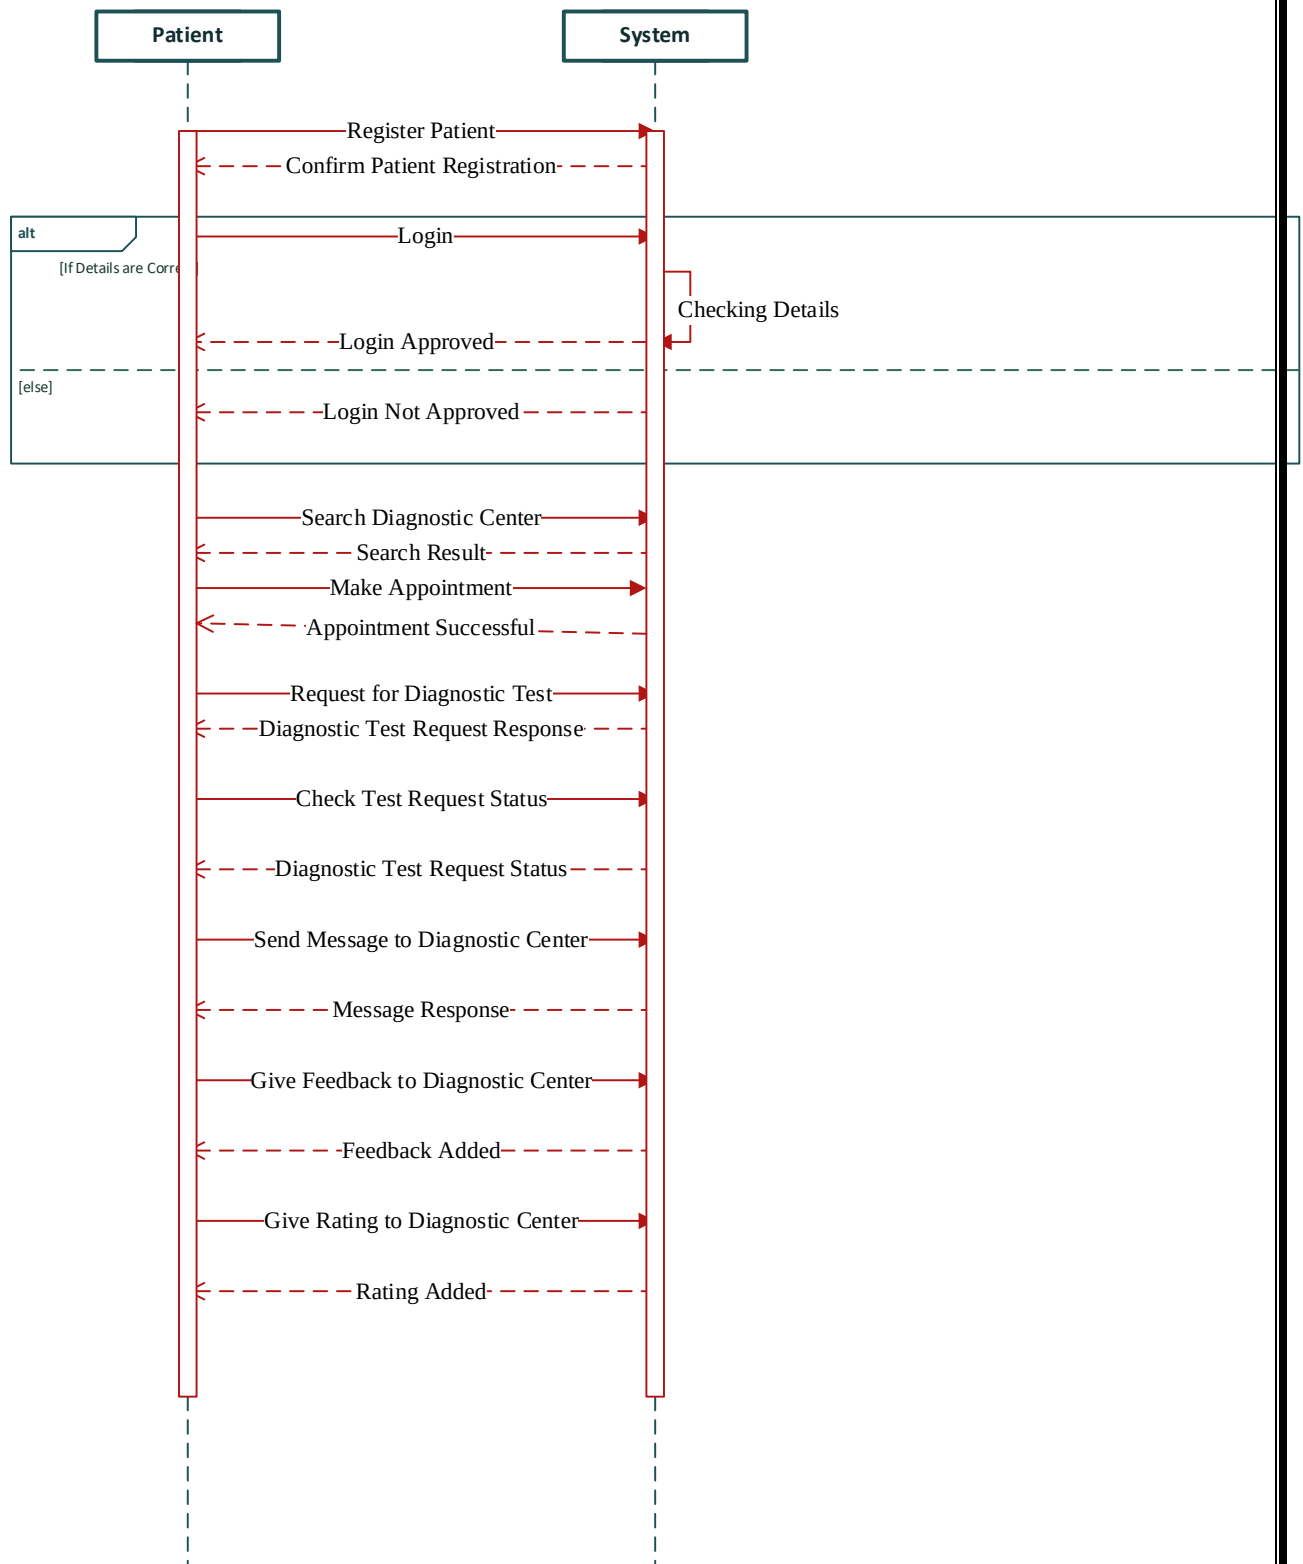

- For Administration

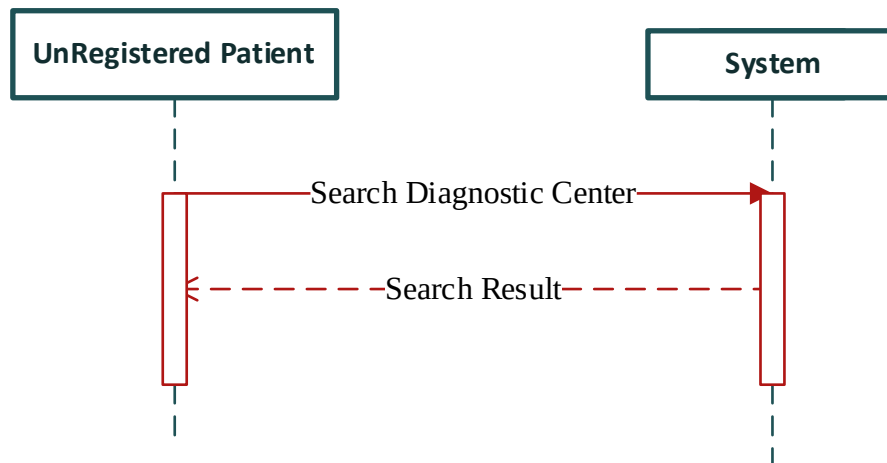

- For Manager

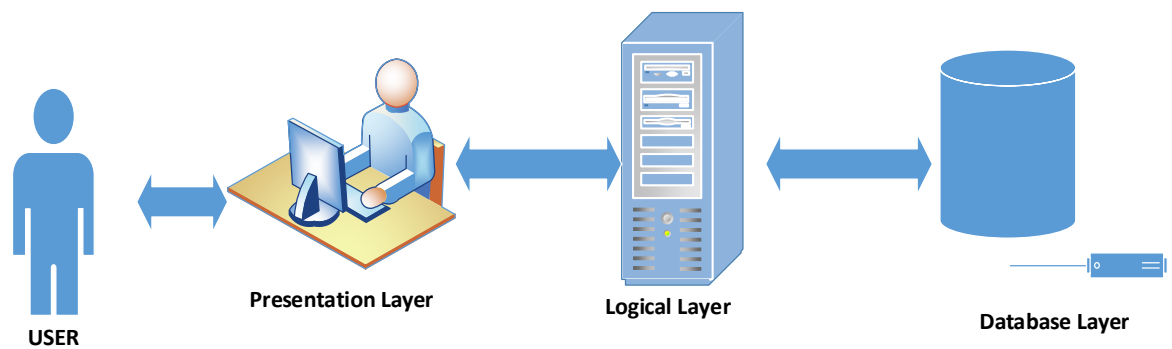

- For Patient or Registered Patient

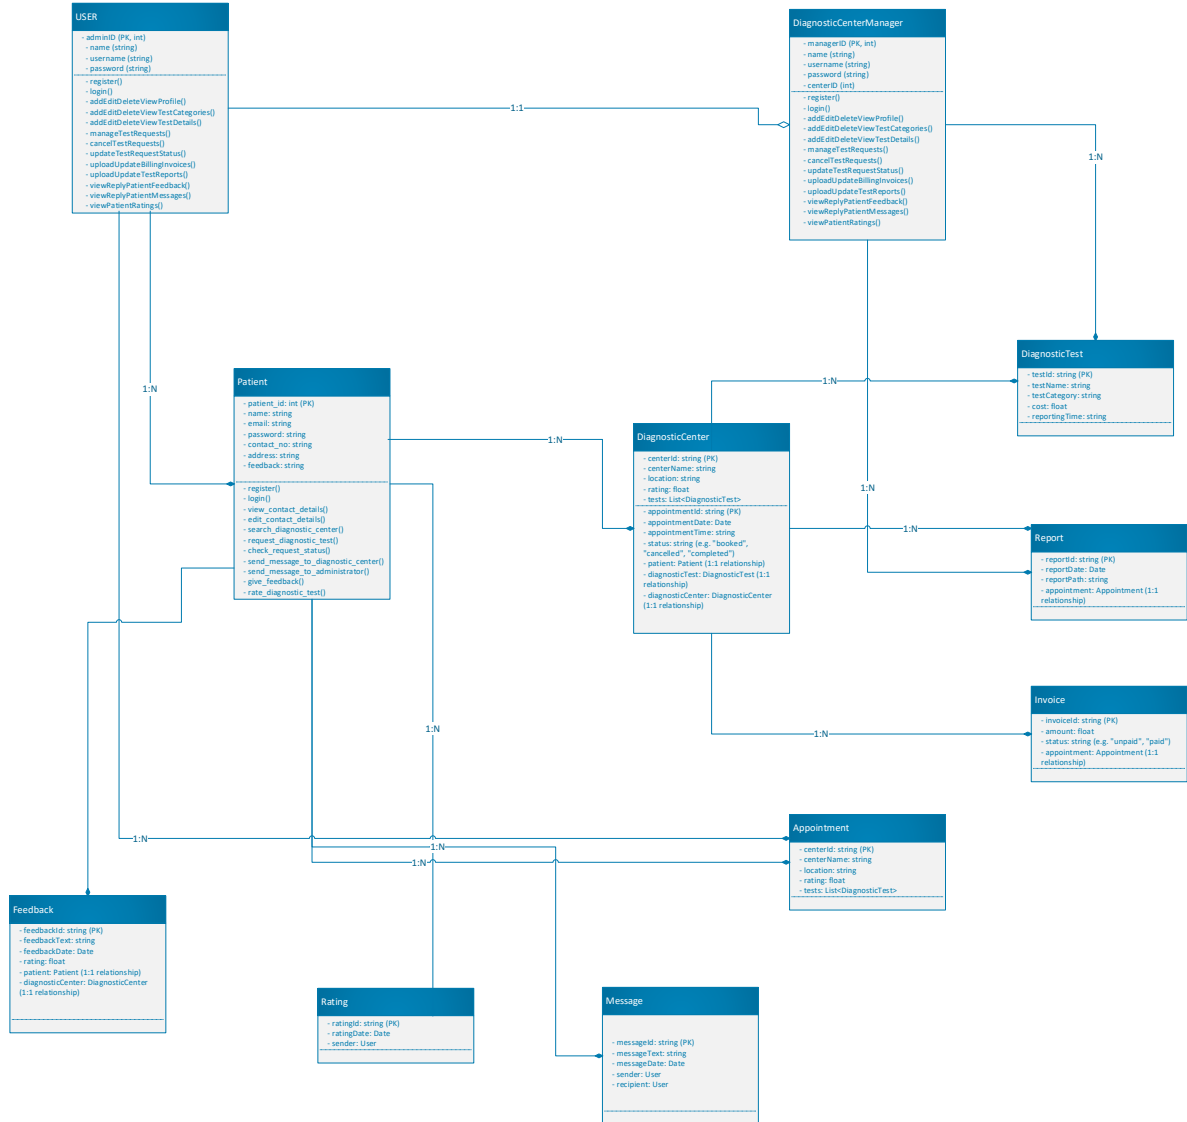

- For Unregistered User

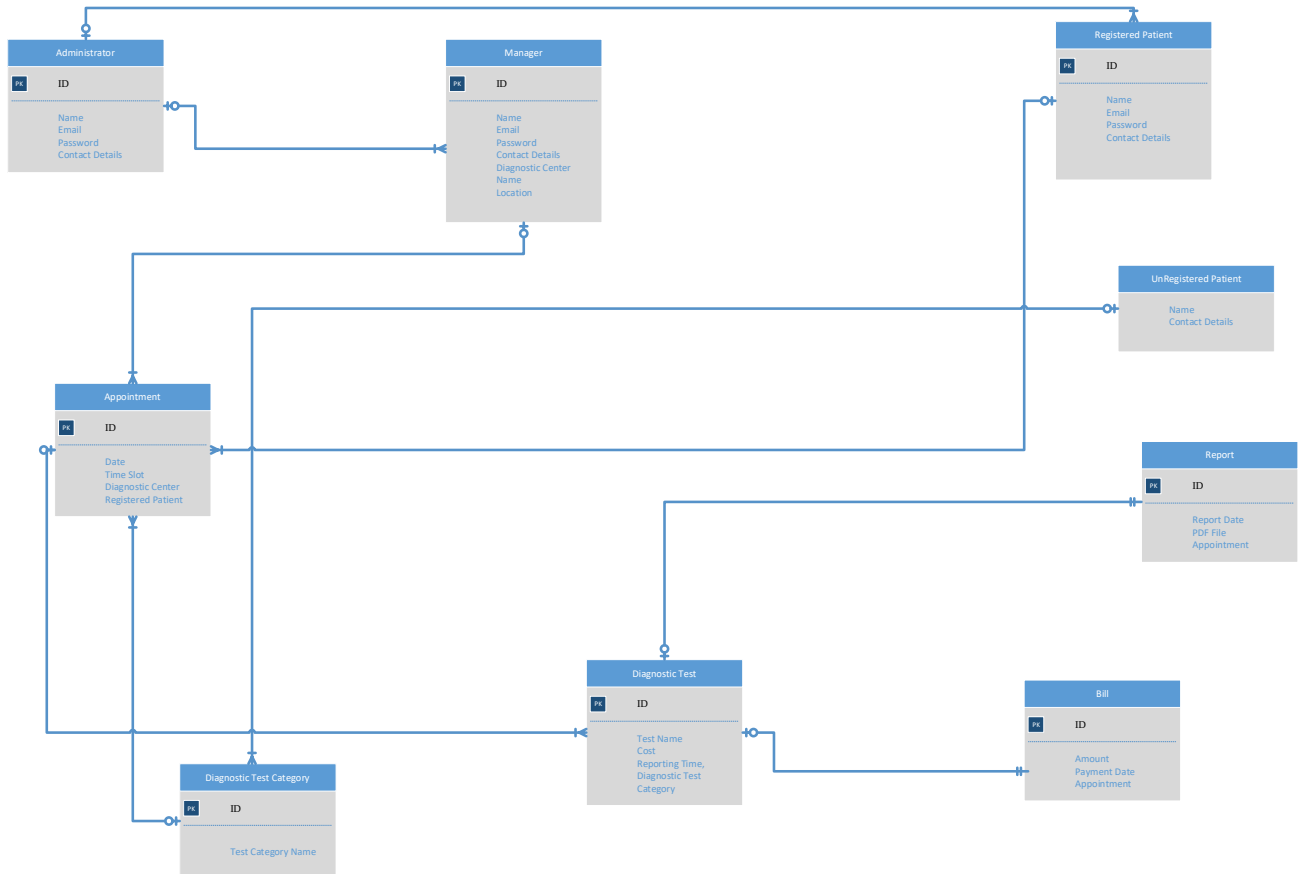

4. Architecture Design Diagram

5. Class Diagram

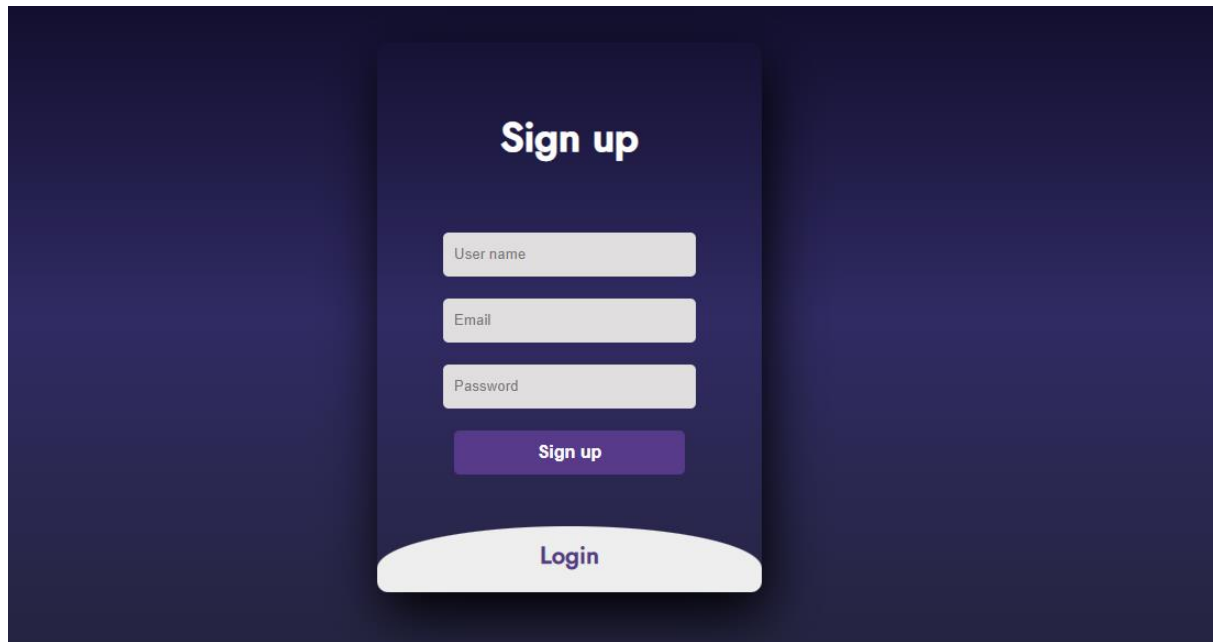

6. Database Design

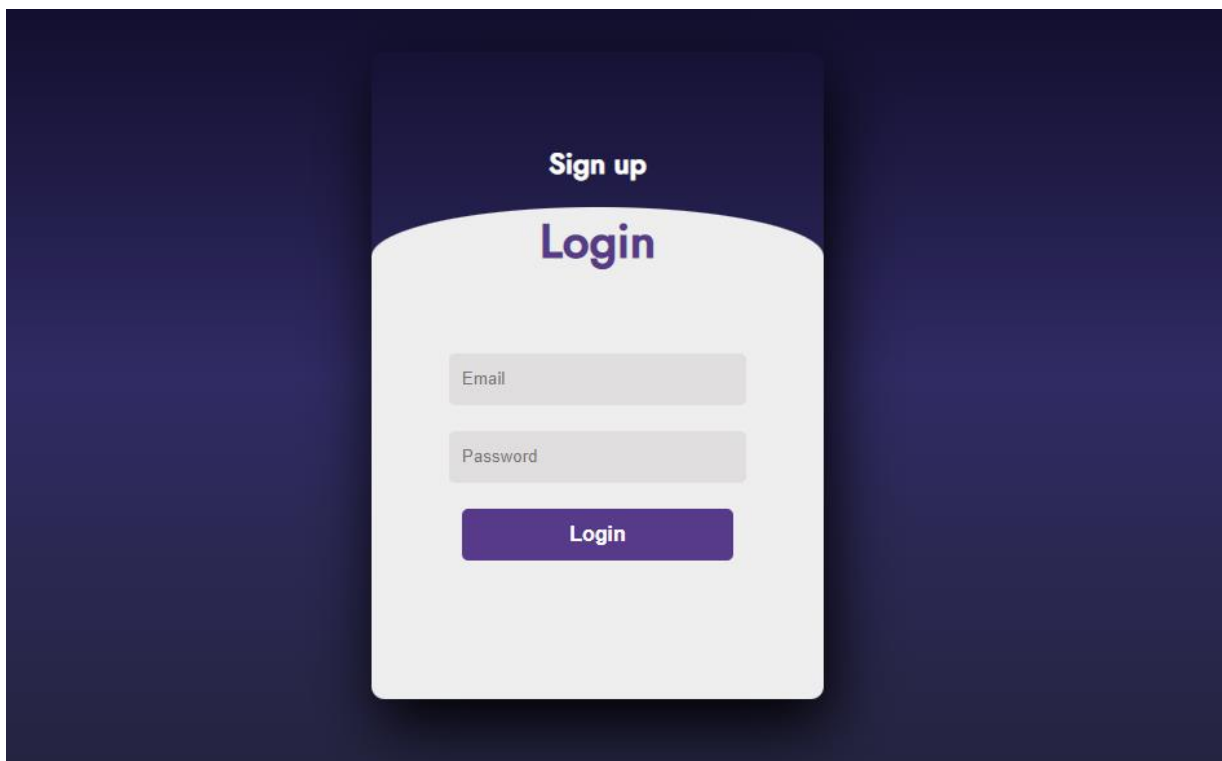

7. Interface Design

(1) Sign Up / Registration Form

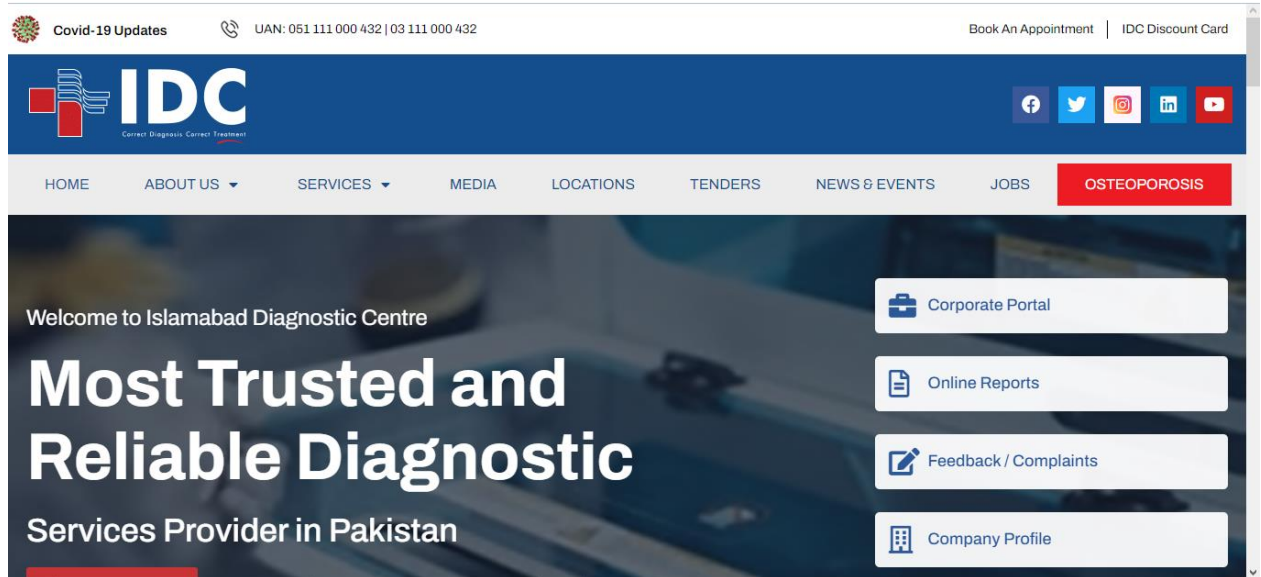

A dark blue background with a central white card. The card has a dark blue header with the text "Sign up" in white. Below the header are three white input fields labeled "User name", "Email", and "Password". Below these fields is a dark blue button with the text "Sign up" in white. At the bottom of the card is a white button with the text "Login" in dark blue.

(2) Log in Form

A dark blue background with a central white card. The card has a dark blue header with the text "Sign up" in white. Below the header is a white button with the text "Login" in dark blue. Below the button are two white input fields labeled "Email" and "Password". Below these fields is a dark blue button with the text "Login" in white.

(3) Home Page

8. Test Cases

Test Case No	Test Case Title	Preconditions	Actions	Expected Results	Tested By	Result
1	Administrator Login	System is up and running, administrator account exists	Enter username and password, click on login button	Administrator should be able to successfully log in to the system	BS140202359	Pass
2	Add Test Category	Administrator is logged in	Click on "Add Test Category" button, enter test category details, click on save	New test category should be successfully added to the system	BS140202359	Pass
3	Edit Test Category	Administrator is logged in, test category exists	Click on "Edit Test Category" button, edit the test	Test category details should be successfully updated	BS140202359	Pass

Test Case No	Test Case Title	Preconditions	Actions	Expected Results	Tested By	Result
			category details, click on save			
4	Delete Test Category	Administrator is logged in, test category exists	Click on "Delete Test Category" button, confirm deletion	Test category should be successfully deleted from the system	BS140202359	Pass
5	Diagnostic Center Manager Registration	System is up and running	Click on "Register" button, fill in required information, click on submit	Diagnostic Center Manager registration request should be successfully sent to administrator for approval	BS140202359	Pass
6	Diagnostic Center Manager Login	System is up and running, Diagnostic Center Manager account is approved	Enter username and password, click on login button	Diagnostic Center Manager should be able to successfully log in to the system	BS140202359	Pass
7	Add Test	Diagnostic Center Manager is logged in	Click on "Add Test" button, enter test details, click on save	New test should be successfully added to the diagnostic center's profile	BS140202359	Pass
8	Edit Test	Diagnostic Center Manager is logged in, test exists	Click on "Edit Test" button, edit test details, click on save	Test details should be successfully updated	BS140202359	Pass
9	Delete Test	Diagnostic Center Manager is logged in, test exists	Click on "Delete Test" button, confirm deletion	Test should be successfully deleted from the diagnostic center's profile	BS140202359	Pass

Test Case No	Test Case Title	Preconditions	Actions	Expected Results	Tested By	Result
10	Patient Registration	System is up and running	Click on "Register" button, fill in required information, click on submit	Patient should be successfully registered to the system	BS140202359	Pass
11	Patient Login	System is up and running, patient account exists	Enter username and password, click on login button	Patient should be able to successfully log in to the system	BS140202359	Pass
12	Search Diagnostic Center	Patient is logged in	Enter search filters, click on search	List of matching diagnostic centers should be displayed	BS140202359	Pass
13	Book Appointment	Patient is logged in, diagnostic center is selected	Click on "Book Appointment" button, select appointment time, click on save	Appointment should be successfully booked and sent for approval to diagnostic center manager	BS140202359	Pass
14	View Reports	Patient is logged in, test is completed	Click on "Reports" section, select report	Report should be displayed in PDF format	BS140202359	Pass
15	Give Feedback & Ratings	Patient is logged in, Click on Feedback	Click on Feedback	Feedback is not give or not available	BS140202359	Pass
16	Unregistered Patient Search	System is up and running	Enter search filters, click on search	List of matching diagnostic centers should be displayed	BS140202359	Pass
